Credit Assistant: SaveIQ – AI Savings Goal Tracker

Project Description :-

SaveIQ is an AI-powered personal finance and savings management platform designed to help users create, monitor and achieve their financial savings goals. The platform helps users track important savings information such as target amount, initial savings, current progress, remaining amount and goal deadline.

The system combines financial tracking with Generative AI to provide personalized savings recommendations, actionable financial guidance and strategies for improving saving discipline. Users can create multiple financial goals such as an Emergency Fund, Laptop Purchase, Vacation Plan or other personal savings objectives.

The application provides an interactive dashboard with savings progress, active goals, completed goals, overdue goals, upcoming deadlines and financial statistics. It maintains savings goal records so users can understand their progress and monitor their financial performance over time.

SaveIQ is designed with a modern, responsive and user-friendly interface and uses Google Apps Script, Google Sheets, JavaScript, HTML, CSS, Groq API and Gmail Services to create an intelligent AI-powered savings management application.

Technology & AI :-

- Frontend: HTML / CSS / JavaScript
- Backend: Google Apps Script
- Database / Storage: Google Sheets

Accredited by NAAC with "A" Grade

- AI: Groq API / LLaMA-based AI Model
- API: Groq REST API
- Email Service: Gmail Services
- Deployment: Google Apps Script Web App
- Version Control: Git / GitHub

Key Features :-

- AI-powered savings recommendations
- Savings goal creation and management
- Target amount and initial savings tracking
- Savings progress monitoring
- Remaining amount calculation
- Deadline and goal-status tracking
- Active, completed and overdue goal management
- Personalized AI-generated financial guidance
- Goal progress visualization
- Financial dashboard with savings statistics
- Upcoming deadline monitoring
- Automated deadline reminder emails
- Daily automated savings-goal monitoring
- Email alert configuration
- Purpose-based savings goal management
- Historical savings information
- Real-time dashboard updates
- Responsive and user-friendly interface
- Secure API key and configuration management
- Multiple savings goals support

Scenarios :-

Scenario 1: A new user creates a savings goal by entering information such as goal name, target amount, initial savings, deadline, email alert preference and purpose. The system validates and stores the goal information in Google Sheets and displays the newly created goal on the SaveIQ dashboard..

Scenario 2: A user selects a savings goal and requests an AI financial consultation. SaveIQ sends relevant financial information such as target amount, current savings, remaining amount, progress and deadline to the Groq AI service. The AI analyzes the information and generates personalized savings recommendations and actionable financial guidance

Scenario 3: SaveIQ automatically monitors active savings goals on a daily basis. The system checks goal deadlines and completion status. If a goal is approaching its deadline and remains incomplete, the system sends an automated email reminder to the user through Gmail Services.

Scenario 4: A user opens the SaveIQ dashboard to monitor their overall savings performance. The dashboard displays total savings goals, active goals, completed goals, overdue goals, progress information and upcoming deadlines. Users can easily understand their financial progress and identify goals that require attention.

Milestones :-

Milestone 1 – Project Planning & Requirement Analysis

Define the objectives of SaveIQ, identify target users, finalize savings-management features and design the overall application workflow and technical architecture.

Milestone 2 – Environment Setup & Google Sheets Development

Set up the Google Apps Script development environment, configure Google Sheets as the data-storage system and create the required spreadsheet structure for savings goals and user information.

Milestone 3 – Goal Management & Dashboard Development

Develop savings-goal creation, editing and management functionality. Implement target amount, initial savings, deadline, purpose and email-alert fields and display the information through the interactive dashboard.

Milestone 4 – Savings Monitoring & Financial Analytics

Implement savings progress calculations, remaining amount calculations, deadline monitoring and goal-status tracking. Develop dashboard statistics for active, completed and overdue savings goals.

Milestone 5 – AI Financial Advisor & Automation

Integrate the Groq AI API to generate personalized savings recommendations and financial guidance. Implement automated daily goal monitoring and Gmail-based deadline notification services.

Milestone 6 – Testing, Optimization & Deployment

Test goal creation, dashboard functionality, financial calculations, Google Sheets operations, AI recommendations, email notifications and frontend-backend communication. Fix errors, improve performance and deploy the completed application as a Google Apps Script Web App.

Conclusion :-

SaveIQ provides an intelligent and interactive way for users to manage their savings goals and improve their saving discipline. By combining financial tracking, automated monitoring, dashboard visualization and Generative AI, the platform transforms savings information into personalized and actionable financial guidance.

The project demonstrates how modern technologies such as Google Apps Script, Google Sheets, JavaScript, Gmail Services and Groq AI can be combined to develop an AI-powered FinTech solution for personal savings management and financial planning.

Expected Outcome :-

SaveIQ aims to help users better organize their savings goals, monitor financial progress and make more informed saving decisions. The platform provides automated savings calculations, goal monitoring, personalized AI recommendations, dashboard analytics and deadline notifications in a single application.

The project will demonstrate practical expertise in Generative AI, FinTech, Google Apps Script, JavaScript, Google Sheets, REST APIs, data visualization, automation, prompt engineering and AI-powered financial analytics, while providing a foundation for future integration with advanced personal-finance services.
